1. Description of the Product

About UBS ETCs

UBS Exchange Traded Commodities (ETCs) are simple and efficient products for investors in commodity markets. They provide exposure to a commodity index and track the index performance on a 1:1 basis, less management fees. UBS ETCs offer cost efficiency, open-ended index tracking and daily exchange liquidity.

Information on Underlying

Underlying(s)	Initial Underlying Level	Conversion Ratio
UBS Bloomberg CMCI Composite CHF Hedged Total Return Index (Bloomberg: XMCCTR)	1140.843	1:10 (10 Unit refers to 1 Underlying)

Index Description

The index measures the collateralized returns from a diversified basket of commodity futures contracts. It is designed to provide diversity across contract tenors and as such invests a weighted amount into available CMCI Standard Constant Maturities, ranging from 3 months up to a maximum of 3 years.

Hedging Mechanism: The collateral on the index notional amount is held in CHF and adjusted on a daily basis; only the daily positive or negative commodity performance in USD is exposed to changes in the CHF/USD exchange rate. As a result, the currency risk is extensively hedged

Further information on the index composition and the historical performance is available on the UBS KeyInvest product page www.ubs.com/keyinvest or on the CMCI web portal www.ubs.com/cmci.
